

NodeJS: Services and Traces

How to monitor NodeJS Transactions/Traces in Datadog

We need to follow those steps below:

1. Open Terminal and navigate to application folder

2. Install “**dd-trace**” package using the command below:

```
npm install dd-trace
```

3. Add the Datadog Tracing Library to your code (put this at top of app.js)

```
const tracer = require('dd-trace').init();
```

4. Perform actions on your application and then navigate to Datadog APM-> Service Catalog page

It will display two services:

- Nodejs
- MongoDB
