

1.2 Application Performance Management (APM)

What is an Application Performance Management?

The translation of IT metrics into business meaning

A practice to monitor application insights, so

we can:

Improve
performance

Improve user
experience

Reduce issues and
errors

APM helps to monitor all key aspects of your project

How is APM monitoring performed?

Metrics

Events

Logs

Traces

Performance trends at-a-glance

Insights from the user perspective

Root cause analysis

Generate alerts on anomalies

Tracks individual SQL statements

Code-level diagnostics
