# How to log data using NLog in .NET?

NLog is a logging platform for .NET with rich log routing and management capabilities.

# Steps

**1. Datadog Agent - we need to enable logs in datadog.yaml file (logs\_enabled: true)**

**2. Create "csharp.d" folder in Datadog\conf.d with a conf.yaml file inside**

**3. Create the empty Datadog.log file**

**4. Application changes - install Nuget Package for NLog**

**5. Configure NLog (using NLog.config) to save logs to a file and this file will be accessed from Datadog later**

**6. Go in Datadog Log Explorer and analyze your data**
